BeFree-2class_EUADR LSTM-GRU

1 Evaluation using the BeFree corpus

1.0.1 EUADR dataset

The EU-ADR dataset contains annotations on drugs, diseases, genes and proteins, and associations between them. In this study, we used only GDAs to evaluate the method. Each association is classified according to its level of certainty as positive association (PA), negative association (NA), speculative association (SA); or false association (FA). The EU-ADR corpus is based on 100 MEDLINE abstracts for each association set, and its annotation was conducted by three experts.
